

Localflow.network

Full Stack Developer Job

You will join the web development team, building the platform for modular chatbots creation and deployment.

You will extensively work on the entire application stack, interacting with IOTA and Ethereum integration experts, the devops team, the bot builders and UX designers.

Localflow is boosting the local economy of tomorrow, enhancing personal microservices, peer-to-peer exchanges and automatized businesses with artificial intelligence.

Responsibility

- Take part in the design of the platform for modular chatbot creation
- Extend and maintain the token rewarding architecture
- Integration of the token wallet, iota and fiat payments

Requirements

- Deep knowledge in the entire web development process (design, development and deployment) across the UI stack covering HTML5, CSS3, JavaScript (ES6) frameworks like AngularJS/ReactJS
- Strong knowledge of Ruby on Rails and Node.js
- Strong knowledge of Postgres, mongodb and redis
- Solid foundation in data structures and scalable software design
- Passion for writing clean code and investigate new patterns
- Ability to abstract and generalize solutions
- Comfortable with Agile development

Plus

- You like team working and contributing to open source
- You like to help, teach and mentor your colleagues
- You experimented with Elastic Search
